

Replication Code for: Minimum Capital and Cross-Border Firm Formation in Europe

MARTIN GELTER

This archive contains the following folders:

- `build_panel_replication`
- `desc_stats_replication`
- `level_regression_replication`
- `regressions_replication`

The R code in the first folder (*build_panel_replication*) creates a file called `panel_7_2023.xlsx` from the various data sources. This file should then be copied into each of the other folders. The R code there will then produce the various tables and figures in the paper. *desc_stats_replication* produces the descriptive statistics, whereas the other two folders produce two sets of regressions. The first few lines of each R file load the necessary R packages and specify which version of each package was used.
